

# Example 1: car and Racetrack

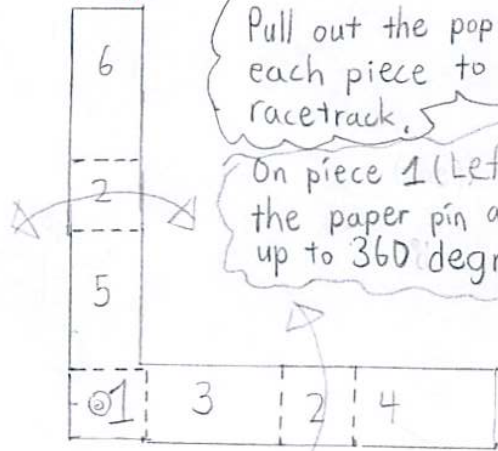

2 cars in a package.

1. Left side double pieces with a paper pin
2. Right side double pieces
3. Front side piece
4. Back side piece
5. upper piece
6. bottom piece

Each piece has pop-out paper dividers. Those dividers are flattered when the cars are in the package.

Convert the package.

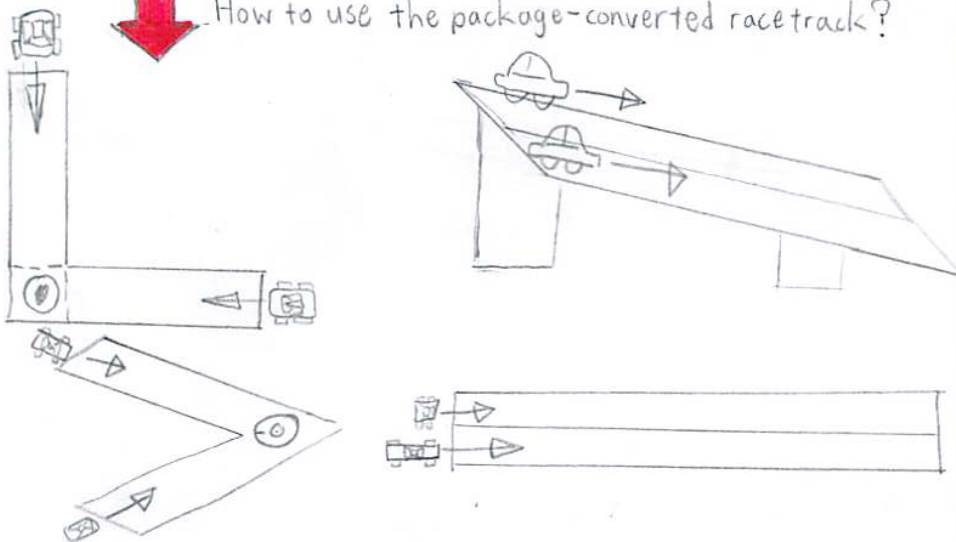

Pull out the pop-out paper dividers in each piece to create a two-lane racetrack.

On piece 1 (Left side double pieces), the paper pin allows tracks to rotate up to 360 degrees.

pieces are magnetically attached in box form.

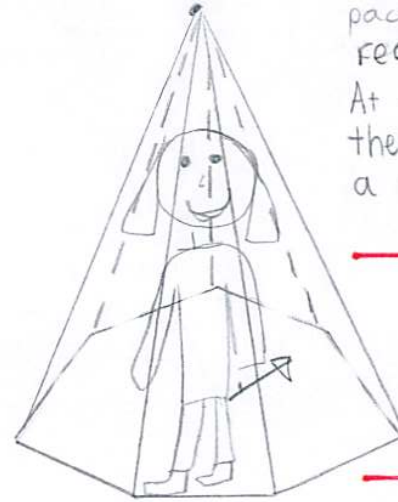

How to use the package-converted racetrack?

# Example two: doll and gameboard

A doll in a pyramid shaped package made of transparent recyclable plastic

At the center of the bottom piece, there is a paper arrow attached to a paper pin.

Convert the package into a gameboard,

Gently pull down each standing piece, but keep it attached to the base.

How to use the gameboard? There are different ways to play the gameboard. I will present 2 ideas.

With my ideas the package will include one set of colored shaped stickers and 7 sets of clothes.

Front: dress secret

Back: color/shape wheel

In each wing there is an instruction for today's outfit. The doll spins the arrow and decides what to wear for that day.

Put the colored shape stickers on each wing. The doll can learn 7 different shapes and colors by spinning the paper arrow.
